SOV/3718

PURPOSE: The book is intended for technical personnel and scientific workers in the metal-forming industry.

COVERAGE: This collection of 12 articles deals with current research on metal-forming operations, the design and operation of press-forging machinery, and stress and force analyses in punching and blanking operations. No personalities are mentioned. References follow each article.

TABLE OF CONTENTS:

Podrez, S. A. [Engineer]. Optimum Values for the Energy Reserve of Flywheels, Angles of Nominal Pressures, and the Number of Strokes in Single-Action Crank-Driven Presses

3

The author discusses GOST standards (4862-49 and 7766-55) for improved crank length and number of strokes for single- and double-crank metal-forming presses. He presents an analysis of crank angles, flywheel stresses, and power reserves in flywheels. Formulas for computing desired values and empirical data suggested as standards are given.

Rushev, Ye. I. [Engineer]. Use of Laminated Plastics as a Substitute for Antifriction Bronze Materials in Press-Forging Equipment

192

The value of substitute materials, principally wood-base laminated plastics, is analyzed. These plastics are to be used in place of critical antifriction metals for the manufacture of press guides, blocks, linings, shaft bearings, etc. The use of laminated plastics is suggested for reasons of economy rather than superiority over bronze, soft metals, or textolite. The physical and mechanical properties of a number of Soviet-made antifriction materials are compared. The plastic suggested as a substitute is designated DSP-B. The maximum load capacity (250 psi /cm²) and speed (0.8 m/sec) for optimum performance are proven empirically, and some direct-application examples are given.

May/June '52

"Blood Transfusion in Pulmonary Tuberculosis," R.I. Buskina, Kirgiz Republic Tuberculosis Hosp, Pruzhe.

"Prob. Tuber" No 3, p 59

Disproves the formerly prevailing theory that blood transfusion in active pulmonary tuberculosis stimulated the tuberculosis process. Demonstrates by clinical data that no pyrogenic reaction was observed following blood transfusions to patients with an active tubercular process, and supports the theory of Pustovalov who considers
224759

that compatible blood does not produce sensitization of the organism. Author believes that any reaction observed following the introduction of blood into a patient with an active tuberculosis process was due to the individual reactivity of the patient's organism to bacterial proteins of the transfused blood.

Title : The Verbal-Motor Method of Work Instructions and
Additional Stimuli.

Orig Pub : Zh. Vyssh. nervn. deyat., 1956, 6, No 6, 913-918

Abstract : Before testing, the subjects were given instructions to press a button of a light switch, and after that a bell, which preceded the turning on of the light, was introduced. In 4 normal subjects, an additional conditioned reflex of pressing the button at the sound of bell appeared, which afterwards was "spontaneously" inhibited, as not corresponding to instructions. In 47 neurotic patients, the additional conditioned reflex did not arise; in 8 it was formed with difficulty. "Spontaneous" inhibition was observed in 22 patients, 9 of whom were weak. In 19 patients the inhibition of the additional conditioned reflex needed additional instruction and was delayed.

TITLE: Reflexograph for studying human higher nervous activity

SOURCE: Fiziologichnyy zhurnal, v. 12, no. 2, 1966, 269-272

TOPIC TAGS: central nervous system, conditioned reflex, reflexograph, human neurophysiology, higher nervous activity

ABSTRACT: This 85-watt monitoring and recording console reflexograph (weight -- 12.5 kg; dimensions -- 49.5 x 32 x 30 cm) was constructed by the authors to enable the operator to present accurately and measure signals and vocal stimuli, to control intervals between the stimuli, and to measure the latent periods and intensity of vocal and motile reactions by patients. The console consists of power (for a 220-v circuit), tensometric, and time assemblies, and offers three voltages (+250 v, +100 v, and about 6.3 v). It contains an interval timer, two microphones, tensometers to measure forces (5-5000 g) exerted by subjects pushing electric buttons, amplifiers, transformers, a potentiometer, selenium rectifiers, a filter, and a camera (speeds, 2

1 mm/sec., 2.5 mm/sec., 5,10,25, and 100 mm/sec) which shows the intensity and duration of stimuli and reactions. An electric lamp, buzzer, bell, and human voice are used as stimuli, with durations of 2 sec. The duration of intervals can be 1—20 sec. The reflexograph satisfactorily passed laboratory tests in 1965 and was submitted to the Clinic of the Department of Psychiatry and Pathology of Higher Nervous Activity. Orig. art. has: 3 figures. TITLE: Portable chopper

SOURCE: Lesnaya promyshlennost', no. 9, 1965, 1-2

TOPIC TAGS: forestry, forest product, agricultural machinery

ABSTRACT: The DDP disc chopper (which has been undergoing experimental testing at the Kholmech Logging Facility of the Bryansk Forestry Administration) is described. The chopper can be mounted on a single axle trailer or operate in a stationary position. It can be powered by electric motor or tractor. The article gives a detailed description of all the operating parts, its technical parameters, production efficiency, and its ability to handle various types of tree tops and branches. Suggestions are given for improving its efficiency and reducing the amount of power necessary for its operation. Orig. art. has: 2 photographs, 2 tables,

Control of harmful cutworm moth. I. L. Rusiashvili.
Vinodelia Vinogradarstvo S.S.S.R. 11, No. 2, 39-40(1951).
— The life cycle of the cutworm moth (I) is described and the effectiveness of various insecticides against I is reported. K arsenate (II), DDT, "meritol," Na fluosilicate, and Paris green (III) were studied against the caterpillar stage of the moth. All the insecticides produced 100% kill, but varied in their adherence to the leaf and their toxicity to the plant. Least toxic were II and III, then came K fluosilicate, DDT, and "meritol." All of the preps., except the fluosilicate, showed good adherence to the leaves. Either II or III are recommended for control of I at 10-16 kg./ha. III should be used as a 0.2% soln. S. Gottlieb

Title: On the Possibility of Producing Highway Blocks from Sand-Lime Masses
by Treatment in an Autoclave

Original
Periodical: Drogownictwo, 1956, Vol 11, No 6, 141-143; Polish

Abstract: It has been shown that it is possible to produce blocks with a compression strength of up to 300 kg/cm^2 and high resistance to abrasion from mixtures containing (in percent): sand 79, slaked lime 8.5, powdered quartz or loess clay 10, portland cement 2.5, and moisture 8. The addition of basaltic fines is recommended for improving the resistance to abrasion.

Konartewski, J., and Rusiecki, S. RELATIONSHIP BETWEEN REFRACTORINESS UNDER LOAD AND GRAIN SIZE OF GROG IN THE MIX. *Przemysl Chem.*, 18, 441-44 (1941).—
 The brick studied consisted of a mixture of clay and grog in the ratio of 1:1, were fired to 1300°C., and differed only in the grain size of grog. It was found that brick containing a larger amount of fine-grained grog had a higher softening point; the difference amounted to 50 to 120°C. in the same group.

Relation between refractoriness under load of grog fireclay bricks and the size of the grains of grog in the mass. J. Komarzewski and *S. Kusiński. Przemysł*

Chem. 18, 441-4(1974).—The softening point of the bricks rises with the fineness of milling of the grog particles.

Determination of activity of sedatives. J. MOCIMAROWSKI and W. KUCZYNSKI (Bull. Acad. Polon. Sci., 1957, Cl. 164, 797-801).—Dress tracings are taken of the movements of mice after anesthesia by cocaine and then after application of a sedative which is given prior to the cocaine. The cocaine-antagonizing effect of a sedative is thus tested. F. J. A.
